

The canteen of the college which was just a fledgling last year, has now been able to raise its beautiful head among the murky waters of instability it suffered during the first few months of its birth pangs.

As was envisaged during the action plan at the beginning of the year, a fishery project, on a large scale, is thought of to be taken up, on the plot of land just lying adjacent to the college wall. A natural ditch lies adjacent to the college boundary wall. During the monsoons, the ditch remains covered with water. A little effort may very soon see a fishery taking shape within the confines of this natural ditch. A small amount of internal resource was generated from the fishery, on a very small scale, in front of the college.

The building of the college has been renovated. There is a 24 hours water supply with 'aqua guard' facility.

27. Technology upgradation:

There has been no technology up gradation, as of now.

28. Computer and internet access and training to teachers and students:

There is no internet access available to the teachers and students. Training in computer application has started for the teachers.

There is a Computer Centre in the college. At present there are two computers.
